

MY CAREER WAS SWITCHED ON AT THE FAA.

Electronics Engineers

Engineers at the FAA effect change in the world's largest aviation system. You will be responsible for preparing, managing and overseeing engineering project plans for the implementation and integration of advanced equipment for the National Airspace System. You will also coordinate cutovers and perform analysis for siting and alignment for all critical equipment. Switch to an opportunity with an agency that will expose you to the latest electronics technology.

Qualifications

Qualifications vary according to job position. A B.S. in electrical engineering or an equivalent combination of education and experience is required for entry-level positions. You must be a United States citizen.

To find out more about the FAA and our outstanding career opportunities and benefits, visit our Career Web site at <http://jobs.faa.gov>.

The FAA does not discriminate on the basis of political affiliation, race, color, religion, national origin, sex, sexual orientation, marital status, age, disability, or any other characteristic not bearing on job performance.

On an individual case basis, this agency also makes reasonable accommodations for applicants with disabilities.

When the FAA was established by the Federal Aviation Act of 1958, our primary responsibility was the safety of civil aviation. Today we operate the world's largest aviation system. We are responsible for the safety and certification of aircraft and pilots, for the around-the-clock operation of our nation's air traffic control system, and for the regulation of U.S. commercial space transportation. We're looking for employees to help us maintain our place as the world leader in aviation. So, if you have ambitious goals, this is the place to realize them.
