

ATC INSTRUCTOR JOBS AVAILABLE

Help build the future ATC workforce

The FAA will be hiring approximately 12,500 new controllers within the next ten years to stabilize the Air Traffic Control workforce into the future. This has created a need for ATC Instructors and the University of Oklahoma has positions immediately available at the Mike Monroney Aeronautical Center located in Oklahoma City. The OU instructors assist the FAA in administering the initial portion of the FAA Air Traffic Training Program. Now is the time to pass on our legacy to this new ATC workforce.

The Instructors will work in radar, non-radar or classroom instruction in a very relaxed, but professional teaching environment and enjoy the benefits of being on the University of Oklahoma staff.

These positions are available to former or retired FAA Air Traffic Controllers and include a generous salary and benefit structure. A background check and security clearance will be required.
